**The FUTURE of
FERTILITY
PRESERVATION
is HERE.**

THE FUTURE OF FERTILITY PRESERVATION IS A NETWORK OF SOLUTIONS

ReproTech is building the future of fertility preservation; we invite you to become a part of it. For over 20 years, we've been developing a network of fertility preservation partners designed to connect oncologists, nurse navigators, social workers, and urologists with IVF centers who can help patients protect their future fertility. Joining the Fertility Preservation Network opens the doors for IVF centers to become a life-saving resource for cancer patients, military personnel, high-impact athletes, and pre-vasectomy patients in your area. By becoming a member of the FPN you become the link for preserving their fertility today and their first call in the future when it's time to begin their family.

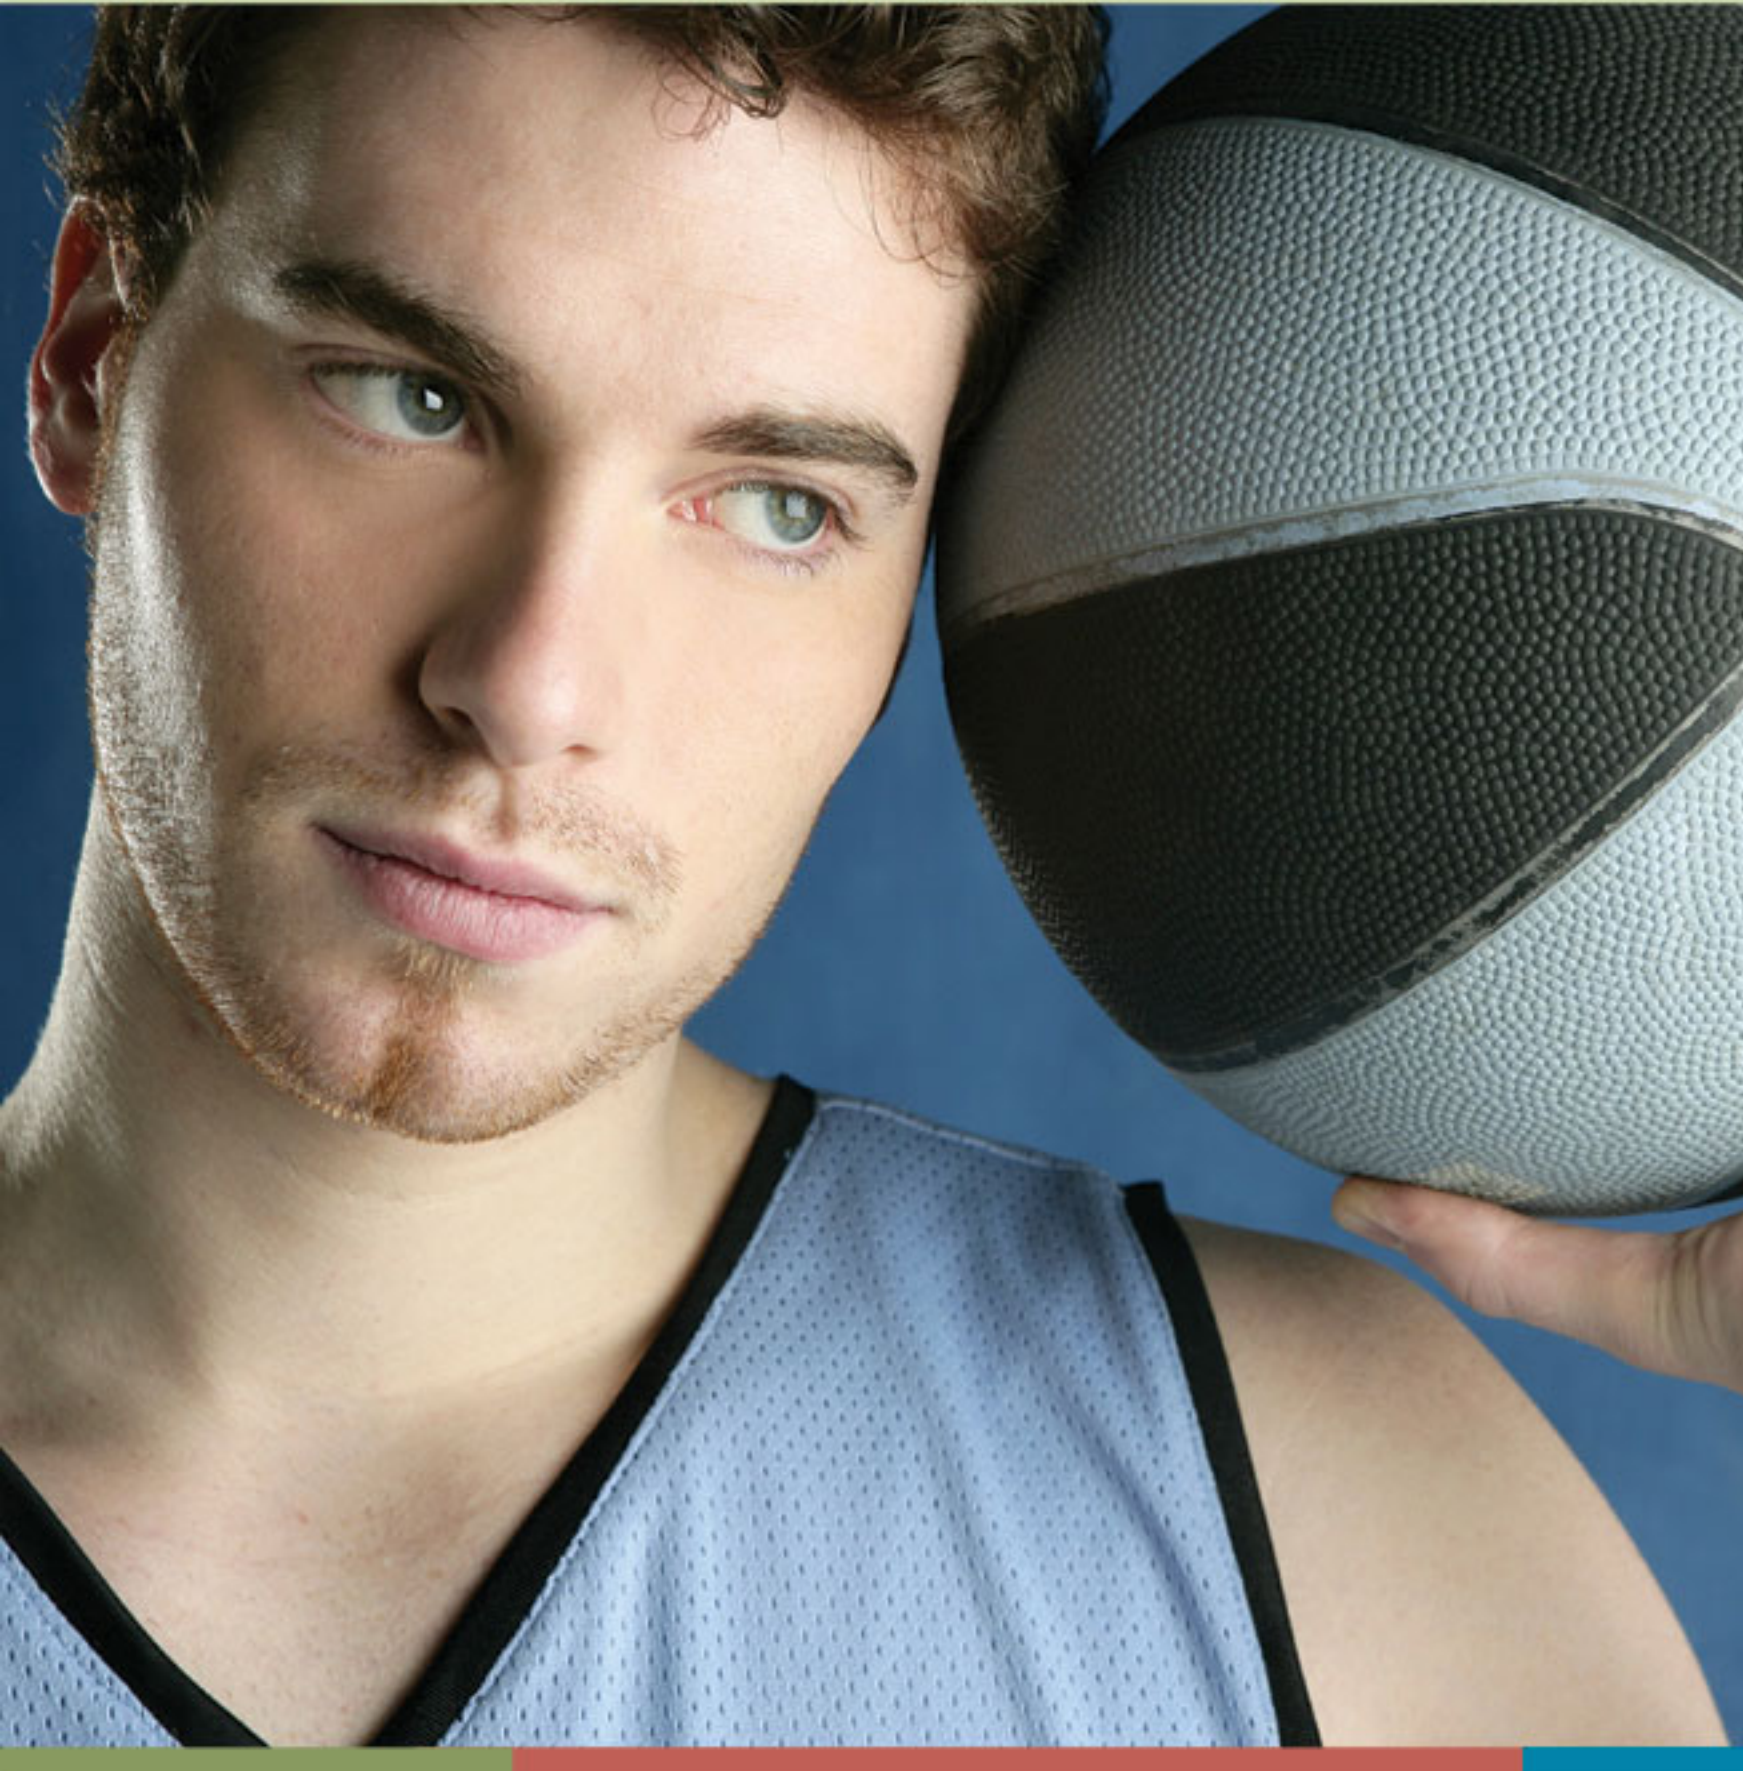

IT STARTS WITH ONGOING EDUCATION

Cancer treatments put patients at a high-risk for infertility. So we've been working with oncology specialists to help them understand the need to talk with their patients about preserving fertility before starting treatment. Today, more and more cancer patients are getting the chance to store eggs, semen, and embryos prior to treatment. We've been getting the word out to men and women in high-risk occupations, as well. Today, hundreds of men and women are storing eggs, semen, and embryos prior to military deployment. We're working with police, firefighters, and professional athletes, as well as men seeking vasectomies. Wherever there is a risk of fertility loss, we're letting people know there is a simple, cost-effective option to secure their future hope.

Your IVF center can help patients with these needs; we'll help get them to your door. Through our ongoing education strategies in tradeshow, online, and our Fertility Preservation 101 booklet, we're building awareness of the need for your services. We've even developed a free mobile device app for these professionals to use, instantly displaying the nearest center within the FPN where they can send patients.

Instant connections to FPN members are available in our free app.

PROTECTING THEIR FUTURE

With the rise of testicular cancer and more men opting for vasectomies, men are being much more proactive about protecting their fertility. When you join the Fertility Preservation Network, your clinic will become one of the preferred options for these men to cryopreserve their sperm. You can confidently depend on ReproTech for the long-term storage of their fertility tissues and when they need your services again, we always direct them back to you. Together we can help men of all ages and in all situations preserve their chance to become fathers.

Safety: As long-term storage specialists, we've gone well beyond the industry standards in creating safeguards to assure the safety and accuracy of tissues entrusted to us. We monitor our tanks 24/7, with a comprehensive system that archives all data four times daily off-site. These monitoring systems include alarms and direct messaging services so if there is ever a problem, a ReproTech employee is dispatched to the facility immediately. Our facilities themselves are models of security and safety, each strategically located and retrofitted with environment specific features, like our Florida facility which is the only storage facility in the country with a Category 5 hurricane shelter.

Financial Aid: When preserving fertility becomes a financial issue, ReproTech is able to offer assistance either through our own exclusive program or one of our financial assistance program partners. Feel free to have your patients contact us about their options.

Safe and Secure Shipping: We've pioneered the industry's "best practices" for shipping. Our redundant shipping containers assure the safety of specimens in transit. In addition, every shipment is eligible for our exclusive shipping insurance.

Accreditations: Our centers and shipping processes have been licensed and accredited by the AATB, NYSDOH, and others, ensuring the highest level of compliance and safety for all specimens.

These are just a few of the highlights that make ReproTech the ideal partner for long term storage. For more information and a complete list of credentials, visit our website at www.reprotech.com.

SHE STILL WANTS TO HAVE CHILDREN

Newly diagnosed with cancer, Jane (and 150,000 others each year) has a lot to deal with. But we're making sure her oncologist advises her to explore her options to preserve her fertility before starting treatment. Joining the Fertility Preservation Network makes your clinic an option her oncologist, nurse navigator, or social worker can easily offer. And because treatments can go on for several years, long-term storage is an essential part of helping Jane.

Partnering with ReproTech ensures her reproductive tissues are safely stored for as long as she needs and accurately transferred when she's ready to start the next chapter of her life.

FERTILITY PRESERVATION 101

"World's most helpful fertility preservation guide"
—Fertility Preservation Network

Oncology professionals are provided a ready resource of fertility preservation options with this handy tool.

THE LONG-TERM STORAGE EXPERTS

ReproTech provides long-term cryopreservation storage. Period. Nothing else. Since 1990, ReproTech has been working with IVF centers worldwide to help them overcome one of the biggest liabilities an IVF center faces: long-term storage. We provide the industry's safest, most secure, and best managed long-term storage facilities. In fact, they are the facilities most IVF centers recommend for ongoing storage. Here are just a few reasons why:

Automatic Transfer: Once you're a part of the ReproTech Fertility Preservation Network, you get to focus on what you do best and we take care of the long-term storage. When an FPN referral comes into your clinic, the specimens are automatically shipped to ReproTech, free of charge.

Potentially Infectious Disease Storage: ReproTech provides segregated storage services for patients who have tested reactive for any communicable disease, such as HIV, Hepatitis B, Hepatitis C, or syphilis. ReproTech has created the industry standards for assuring the safe storage for all patients who trust us with their reproductive tissues.

The image shows a screenshot of the ReproTech website homepage. The header features the ReproTech logo on the left and social media icons (Facebook, Twitter, RSS, YouTube) on the right. Below the header is a navigation menu with links for HOME, ABOUT US, STORIES, SERVICES, LINKS, CONTACT US, and NEWS. The main content area is divided into two columns. The left column features a large blue-tinted image of a woman and a child, with the text "THE WORLDWIDE LEADER IN LONG-TERM STORAGE" overlaid. The right column contains a green box with the text "FOR DOCTORS ONLY" and "VIEW OUR CREDENTIALS", and a blue box with the text "REPROTECH'S STRATEGIC PARTNERS". Below this is a section titled "OUR SERVICES" with five columns: FERTILITY PRESERVATION, SPERM STORAGE, EMBRYO STORAGE, OOCYTE STORAGE, and OVARIAN TISSUE. Each column contains a brief description and a "Read More..." link.

HE CAN'T WAIT TO BE A FATHER

More and more, men in occupations that have greater risk, such as high-impact athletes and military personnel, are more frequently using fertility preservation to secure their legacy. As a part of the Fertility Preservation Network, you'll become a resource to help these men preserve their lineage. Most of these men will need long-term storage before they come back to you for assistance starting their next career as a father. Partnering with ReproTech provides your patients with the industry-leading option for storage and accurate tissue transfer. Let's help these men protect their fertility as they focus on protecting themselves.

As well as becoming the undisputed leader in safe, long-term storage and specimen transfer, ReproTech is at the forefront in developing awareness in the oncology community. Through these efforts, Fertility Preservation Network members are seeing the fertility preservation portion of their business grow as they are introduced to new patients on an ongoing basis.
