STORAGE

For 34+ years, ReproTech has been dedicated solely to the long-term cryostorage of reproductive specimens. We work with fertility clinics of all sizes across the U.S., from large hospitals and universities to independently owned physician practices. We have the experience, system design, proven processes, and infrastructure in place to keep your precious specimens safe.

ReproTech Fees

We have a simple, straightforward fee structure. You won't be charged for add-ons such as handling or account set-up fees (commonly charged by commercial sperm banks who also offer long-term storage). Clients are not charged an additional storage fee for semen or oocytes when they are storing embryos at ReproTech. To request our current fee schedule, scan the QR code below.

Disaster-Safe Storage

ReproTech provides the safest long-term cryostorage for your specimens. Our five strategically located facilities are equipped to ensure the highest level of protection.

- Multi-Layer Monitoring Systems
- Redundant Communication and Notification Systems
- 24-hr video surveillance
- Specimens are protected inside our storm and wildfire-safe cryostorage vaults

#TheCryostorageExperts

Transportation

ReproTech offers in-person regional courier service, and ships nationwide via United Parcel Service (UPS) Premier Healthcare for shipments requiring non-local delivery. ReproTech staff individually tag shipping tanks with our own GPS trackers so the delivery of specimens can be monitored in-house. Additionally, UPS Premier Healthcare service provides:

- Priority handling of ReproTech shipments
- Enhanced sensor-based visibility while in transit
- Live 24/7 location monitoring
- Proactive delay follow-up and advance recovery, if necessary

Trained & Experienced Staff

Our Cryostorage Specialists undergo extensive training to handle your specimens with precision. Each week, they safely ship and receive hundreds of patient specimens, strictly following the cryostorage processes and protocols ReproTech has refined over the past 34+ years—ensuring specimens remain safe and secure.
